

# RG-1001

The RG-1001 is a carrier-grade onsite RADIUS server that provides enterprise-class reliability with a web interface. Your IT staff will be able to administer their network confidently knowing that the best security protocols are being used to protect the end user. The RG-1001 has been specifically designed for Hotel and Resort environments in which customer provisioning, authorization, and accounting are mission-critical requirements. The built-in NAS (Network Access Server) is compatible with most third-party Access Points and Gateways.

The RG-1001 uses the latest hardware technologies to provide you with years of reliable service. The embedded Linux operating system allows for a stable and scalable solution, along with an easy implementation. Multi-level, multi-user administration profiles ensure access for the necessary resource levels of your IT department.

### Features

- 4 GB ECC RAM
- 64 GB Solid-State HDD
- Intel Pentium 2.60 GHz Processor
- Linux OS
- 1u Rack Chassis
- Powerful Onsite RADIUS
